Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claim 1 is, drawn to a recording and reading apparatus comprising an address detection means based on calculation means, classified in class 369, subclass 44.27.
- II. Claim 2 is, drawn to reading and recording apparatus comprising: a logical operation means based on an envelop signal, classified in class 369, subclass 44.28.
- iii.. Claim 3 is, drawn to a device for reading and recording data having crosstalk removing means, classified in class 369, subclass 44.32.

The inventions are distinct, each from the other because of the following reasons:

Inventions group one and any of group two or three are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination group one has separate utility such as an optical disk reading apparatus which does not require the use of a crosstalk removing means based on an envelop signal. See MPEP § 806.05(d).

Inventions group two and group three are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable. In the instant case, subcombination group two

has separate utility such as an optical disk reading apparatus which does not require the use of a logical operation based on a binarized signal. See MPEP § 806.05(d).
